

Catastrophic Success: Why Foreign-Imposed Regime Change Goes Wrong
Ithaca, N.Y.: Cornell University Press, 2021

Supplementary Materials for Chapter 4, Part 3

Alexander B. Downes

downes@gwu.edu

January 21, 2022

One of the most important sources I use for building my dataset of foreign-imposed regime changes is the *Archigos* Dataset on Leaders, assembled by Giacomo Chiozza, Kristian Skrede Gleditsch, and H.E. Goemans.¹ As I note in Chapter 4 (see p. 340, n. 14), in many instances my coding of leaders who enter office through foreign intervention diverges from theirs. The reason is that we use different definitions for foreign imposition. According to Goemans, Gleditsch, and Chiozza, for a leader to be coded as coming to power through foreign imposition in *Archigos*, “we need direct imposition. It is not sufficient that another state supports a particular choice of leader or tries to influence leader selection indirectly.”² These criteria result in a list of only forty foreign-imposed leaders. In *Catastrophic Success*, by contrast, I define foreign-imposed regime change as “the forcible or coerced removal of the effective, or de facto, leader of one state—which remains formally sovereign afterward—by the government of another state.”³ My definition requires only that “an external actor must be primarily responsible for deposing the targeted leader—or at least play a substantial role in his removal.”⁴ My definition emphasizes the manner of leader removal, but the same criteria can be applied for how leaders enter office. In the vast majority of cases, as explained in the book, the external power removes both the sitting leader and empowers the new one. Interveners can accomplish this by invasion, coercion, or working with local partners. In other words, direct imposition by the foreign power is not required for a leader to be considered foreign-imposed according to my definition. My list of foreign-imposed leaders thus comes to about one hundred.

The Leader-Spell Dataset

Table 4.1A below lists cases of foreign impositions of leaders included in version 2.9 of the *leader-spell* version of the *Archigos* dataset and my dataset.⁵ This version of the dataset covers the years from 1875 to 2004. The final column in the table indicates which cases are included in the dataset that produced the results in the analyses using the leader-spell as the unit of analysis in Chapter 4 of the book. There are two things to note. First, as described above, I code far more cases of foreign imposition than are contained in the *Archigos* dataset. Second, seven cases not included in my case universe of foreign-imposed leaders nevertheless appear in the dataset used for statistical analysis: Transvaal 1877 and 1902, Orange Free State 1902, Vietnam 1885, China 1937, and Kuwait 1990 and 1991 (an eighth case, Austria in 1938, is also included based on

¹ Goemans, Gleditsch, and Chiozza 2009.

² Goemans, Gleditsch, and Chiozza 2016.

³ Downes 2021, 20.

⁴ Downes 2021, 25.

⁵ This version of the dataset has one observation per leader-term in office and records the length of tenure and means of entry into and exit from office, among other things.

Todd Sechser's Militarized Compellent Threat Dataset).⁶ I decided to include these cases, even though my research either did not identify them—Transvaal and Orange Free State—or considered them not to be cases of regime change—Vietnam, Austria, and Kuwait I coded as conquest and annexation (the first two cases) and liberation from annexation (the third); and China I considered not to be regime change because Chiang Kai-shek remained leader of China throughout the Sino-Japanese War. The reason I included them is because they were plausible cases and I thought casting a broader net made sense. Including these cases also creates a harder test for my theory because while all of these leaders came to power in leadership regime changes, only three of them were removed through “irregular” means. Including them thus cuts against my hypothesis that leadership regime change increases the likelihood of violent leader removal. The results in the book thus understate the effects of regime change/leadership regime change on the likelihood of irregular removal. Indeed, when I exclude these cases in Table 4.4A below, the strength of my findings increases.

On the flip side, I excluded six cases of foreign imposition as coded by *Archigos*: Albania 1918, Jordan 1921, Mongolia 1921, Czechoslovakia 1938 and 1945, and Liberia 1990. Of these cases, I could find no evidence of foreign imposition in two (Albania and Liberia). In the other four, two (Jordan and Mongolia) were not independent prior to foreign imposition (the former was part of the Ottoman Empire and then became a League of Nations mandate controlled by Britain whereas the latter was part of China); one consisted of conquest and dismemberment by Nazi Germany (Czechoslovakia 1938); and two consisted of resurrection from conquest (Czechoslovakia 1938 and Kuwait 1991). Again, excluding these cases does not create a bias in favor of my theory as four of these leaders were removed irregularly and only three lost power by regular means. Adding these six cases to the dataset does little to change the results, as shown in Table 4.4B below.

⁶ Sechser 2011. The imposition of Arthur Seyss-Inquart is coded as a successful compellent threat for leadership change. See also Downes 2018. Seyss-Inquart was placed in power at Hitler's insistence and a day later requested Austria's annexation into the Third Reich. Austria thus ceased to exist as an independent state.

Table 4.1A. Comparison of Foreign-Imposed Leaders Contained in the Leader-Spell Version of the *Archigos* Data Set on Leaders (Version 2.9) and in *Catastrophic Success*, 1875-2004

Wald Chi2	35.60***	71.61***	282.40***	261.29***

Note: The results in this table exclude the seven cases of foreign imposition from *Archigos* that I included in my analysis in the book—Transvaal 1877 and 1902, Orange Free State 1902, Vietnam 1885, China 1937, Kuwait 1990 and 1991—as well as Austria 1938, which I added based on Todd Sechser’s Militarized Compellent Threat Dataset (Sechser 2011). These results are very similar to those reported in Table 4.4 in the book (p. 226). The coefficients for leadership regime change, however, are larger, indicating that including these cases as I did in the book understates the effect of this type of regime change on irregular leader removal.

Table 4.4B. Competing Risks Analysis of Irregular Removal from Office, 1875-2004, Leader-Spell Data, Six Excluded *Archigos* Cases Added

Note: The results in this table include all thirteen additional cases of foreign imposition from *Archigos* listed in Table 4.1A: the seven included in my analysis in the book (plus Austria 1938) supplemented by the six *Archigos* cases I excluded: Albania 1918, Jordan 1921, Mongolia 1921, Czechoslovakia 1938 and 1945, and Liberia 1990. These results are very similar to those reported in Table 4.6 in the book (p. 231).

The Leader-Year Dataset

Table 4.2A shows the cases of foreign-imposed leaders in the leader-year version of the *Archigos* dataset compared to mine, plus the cases included in the analysis that produced the leader-year results in the book.⁷ Because the *Archigos* leader-year dataset begins in 1919, some of the cases from *Archigos* that I included in my leader-spell analysis cannot be included here: Transvaal 1877 and 1902, Orange Free State 1902, and Vietnam 1885. In addition, because the dataset is coded on an annual basis and lists the leader who held office for the majority of the year, it misses Saddam Hussein's brief rule over Kuwait from August 1990 to March 1991 (but includes the reimposition of Jabir As-Sabah after the war in 1991). China 1937 is also missing from the leader-year version of *Archigos* (Chiang Kai-Shek is coded as the continuous leader of China from 1928 to 1949). Thus, of the seven cases from *Archigos* included in the leader-spell dataset, only one (Kuwait 1991) is also in the *Archigos* leader-year dataset. I exclude it from this analysis. The six *Archigos* cases that I excluded from the leader-spell data (Albania 1918, Jordan 1921, Mongolia 1921, Czechoslovakia 1938 and 1945, and Liberia 1990) are similarly excluded here (as is Austria 1938).

Two things are worth noting. First, I hewed more closely to my own coding of regime change/leader imposition in the leader-year dataset than I did in the leader-spell data. Again, however, this choice exerts virtually no effect on the statistical findings. As shown in Table 4.3A below, adding the eight excluded cases has little effect on the results for regular or irregular removal. Second, slightly less than half of the cases of foreign imposition appear in the leader-year *Archigos* dataset as used by Goemans in his 2008 article as appeared in the leader-spell version. This loss of cases is partially attributable to the reduced time period covered by the data, but also to various other reasons described above.

⁷ It is important to recall that I am using the version of the *Archigos* leader-year data prepared by Goemans for his 2008 article "Which Way Out?" The reason for doing this is that his version includes a large number of control variables not included in my own dataset. Thus, employing his version provides a better test than using the leader-spell version alone. The drawback is that in some instances the availability of control variables results in the loss of some cases of foreign imposition.

Table 4.2A. Comparison of Foreign-Imposed Leaders Contained in the Leader-Year Version of the *Archigos* Data Set on Leaders (Version 2.9 as Used in Goemans 2008) and in *Catastrophic Success*, 1919-2004

Note: The results in this table are produced by a dataset that adds the excluded *Archigos* cases that occurred within the time frame of the analysis (Kuwait 1991, Albania 1918, Jordan 1921, Mongolia 1921, Czechoslovakia 1938 and 1945, and Liberia 1990) plus Austria 1938.⁸ These results in this table differ little from those reported in Tables 4.3 and 4.5 in the book (pp. 224 and 229, respectively).

⁸ See the discussion above in the section on leader-year/irregular and regular removal for further explanation.
